Index

adrenal androgens 155–6
  and breast cancer 187–9
adrenal hormones
  effects on gonad 286–7
  and GnRH secretion 281–3
  and nutritional status 269–71
adrenal insufficiency 156
adrenarche 155–6
amino acid
  metabolism 260–3
  brain uptake 261–2
amniotic fluid
  prolactin content 106–8
androgen deficiency
  and breast growth 162
anti-Müllerian hormone, *see* Müllerian inhibitor
arachidonic acid
  in corpus luteum 221–4

baculum 75
body composition
  and puberty 251–2
body weight
  and puberty 251–2
bovine placental hormones 125–33
breast, benign disease 179
breast bud 155
breast cancer 175–202
  animal models 181–3
  endocrine correlates 183–91
  epidemiology 177–81, 183–91
  mathematical models 191–3
  reproductive variables and 177–81
breast development
  androgen deficiency 162
  androgen excess 163–4
  and breast cancer, human 192–3
  growth hormone 164–5
  human 149–74
  oestrogen deficiency 161–2
  oestrogen excess 162–3
  placental lactogen 164–5
  postnatal 151–7
  prenatal 150–1
  prolactin 164–5
  at puberty 153–4
  rat 181–2
breast stucture, adult
  basal cells 158–9
  duct system 157
  during menstrual cycle 159–60
  luminal epithelium 158
  myoepithelial cells 158–9
  in pregnancy 160–1
  response to steroids 175–202
  see also mammary gland

Caenorhabditis, sex determination 3–5
carbohydrate metabolism 256–9, 263–4
carcinogenesis, and breast cancer 193–5
catecholamines, in corpus luteum 224–5
chromosome crossing-over 8
contraceptive steroids
  and breast cancer 179
corpora cavernosa 74–95
corpus luteum
  in domestic ruminants 203–37
  endocrine control 210–25
  origin of cell types 204–10
corpus spongiosum 74–95
CZB medium 61–2

decidual prolactin, human
  biological activity 112–13
  and growth hormone family 97–148
  receptors 100, 113
  secretion 104, 106–8
dog, breast cancer 182
Drosophila, sex determination 3–5

embryo
  amino acid content 49–50
  ATP requirement 42–3, 51–2
  carbohydrate content 38–42, 49, 58–9
  cell proliferation 57
  delayed implanting 60
  development of culture 36–8, 57–62
  enzyme activity in 52–3
  free radical formation 59–60
  human 47
  mass 38–42
  oxygen consumption 43–4
  protein content 38–42
  two-cell block 59

embryonic genome activation 38–42
erection
  neurotransmitters and 83–6
  neural control of 76–7
  phases 77–9
  vascular changes 79–80
  see also penis
  anatomy 80–3

fat, and steroid metabolism 252
  body composition 251–2
  metabolism 260
fetal growth 111
freemartin 16
free radical formation, in embryo 59–60

genes, and sex determination 1–26
genital ridge 11–18
germ cells
  sex determination 12–14
  and gonadal development 14–18
GH, *see* growth hormone, placental GH
glucose
  metabolism, in embryo 53–4, 58
  transport, in embryo 54–5
GnRH, pituitary responsiveness 272–5
GnRH secretion
  and nutritional status 275–83
  neurotransmitter pathways 278–81
GnRH neuron 282–3
goat, placental hormones 125–33
gonad, *see* ovary, testis
gonadotrophins
  and nutritional status 275–83
  in prepubertal period, humans 152–3
  at puberty 155
growth factors
  and breast cancer 195
  in corpus luteum 224–5
growth hormone
  and breast development 164–5
  effects on ovary 285–6
  and nutritional status 265–6, 273–5
gynaecomastia 156–7

H–Y antigen 9–11
hamster, placental hormones 113–24
human placental lactogen, hPL
  biological activity 109–12
  in fetal circulation 106
  molecular biology 100–2
  non-human primates 113
  receptors 100, 111
  related hormones 97–148
  secretion 103–6

hypothalamic-pituitary system, and under-nutrition 249–311

impotence 83, 86–8
  see also erection
insulin
  effects on ovary 284–6
  uptake into brain 257
  regulation of carbohydrate metabolism 257–9, 263–4
insulin-like growth factors (IGF-I, IGF-II)
  in corpus luteum 224
  and nutritional status 265–6
  stimulation by placental GH 110–11

lactation anovulation 246–7, 268, 273–5
lactation, and breast cancer 178
Leydig cells 17
LH, and luteal function 210–15
  see also GnRH, gonadotrophins
lipid metabolism 260
luteal cell
  morphology 204–7
  origin 207–10
  factors produced by 218–25
luteolysis 215–17, 219–21

mammary gland, effect of placental lactogens 112, 123, 130–1
  see also breast
menarche, and breast cancer 177–8, 185, 192–3
menopause, and breast cancer 178
menstrual cycles
  and breast cancer 177–8, 185, 193
  and nutritional status, 245–7
metabolic rate 242–4, 253–7
metabolism 252–64
  responses to nutrient intake 256–63
Moolgavkar model of breast cancer 191–2
mouse, placental hormones 113–24
  breast development 151
Müllerian inhibitor 13–17
Müllerian inhibitory substance, *see* Müllerian inhibitor

neuropeptide Y 280
neuropeptides 256
nutrient intake
  responses to 256–63
  see also nutrition
nutrition and reproduction 239–311
  experimental models 249–50
  GnRH secretion 275–83
  and ovulation 245–7

and puberty 242–5, 253–6
and reproduction 239–311
and testis function 247–8

oestrogen deficiency
breast growth 161–2
oestrogen receptor
normal breast 160
oestrogens
and breast cancer 184–6
and breast growth 161–2
and gynaecomastia 156–7
levels prepuberty 152–3
oncogenes, and breast cancer 194–5
oophorectomy, and breast cancer 178
os penis 75
ovary
development 14–18
effects of metabolic hormones 283–7
see also corpus luteum
ovulation, and underfeeding 245–7
oxytocin, in luteal cells 206–7, 219–21

parity, and breast cancer 178
parthenogenesis 2
penis
blood supply 74
erection 73–95
innervation 75–7, 82–6
species differences 75–6
see also erection
PG2a
and luteal steroidogenesis 215–17
stimulation by oxytocin 219–21
phytoestrogens 242, 246
placenta, rodent 116–19
placental GH, human
biological activity 109–12
molecular biology 100–2
and prolactin family 97–148
receptors 100, 111
secretion 104–6
placental growth hormone, rodent 113–24
placental lactogen
and breast development 164–5
placental lactogen, rodent 113–24
molecular biology 114–15
secretion 116–22
biological activity 122–4
placental lactogen, ruminant 124–33
molecular biology 125–6
secretion 126–9
biological activity 129–32
placental prolactin
rodent 113–24
rominant 124–33
polster 81–88

pregnancy
and breast cancer 177–8
changes in breast 160–1
progesterone
and breast cancer 189–91
synthesis by luteal cells 210–26
prolactin
and breast cancer 190–1
and breast development 151, 164–5
secretion and nutritional status 266–8, 273–5
see also decidual prolactin
proliferin 115–18
protein metabolism 260–3
puberty
and nutrition 242–5
in humans 244
in males 247–8
and body weight 251–2
and body composition 251–2
see also menarche
pyruvate
transport in embryo 54–5
metabolism, in embryo 53–4, 58

rat
breast cancer 181–2
placental hormones 113–24
nutrition and reproduction 240–88
reproduction, energy requirements 241–2
retractor penis muscle 75

salt balance, and decidual prolactin 112–13
SDM antigen 10–11
seasonal aneostrus 246
Sertoli cell, production of Müllerian inhibitor 11–17, 23
sex determination 1–33
insects 3–5
reptiles 5
in germ cells 12–14
mammals 1–33
nematodes 3–5
sex hormone-binding globulin 154–5
and breast cancer 184–6
sex-reversed mice 6–26
sex-reversed females 18–20
sexual differentiation
breast 152
gonadal 14–18
liver 152
sheep
nutrition and reproduction 240–88
placental hormones 125–33
steroidogenesis, in luteal cell 210–26
Sxr 8–26

Tanner stages of breast development 153
Tdy 7–26
TDF 21–6

testis
  development 14–18
  undernutrition and function 247–8
testosterone, and gynaecomastia 156–7
Tetrahymena 1
thyroid hormones
  and nutritional status 268–9
  effects on gonad 286
Turner's syndrome 161–2
two-cell block 59

underfeeding, *see* nutrition

van Ebner's pad 81
vasoactive intestinal peptide (VIP) 82–6
vasopressin, in luteal cells 206–7

water balance, and decidual prolactin 112–13
witches milk 151
wood lemming 17–18

X-chromosome
  sex determination 1–33
  inactivation 13–14

Y-chromosome
  sex determination 1–33
  expression 11
  mapping 6–10, 20–6

ZFY 8, 22–6
